## AIGTI Mission-Readiness Program

### Removing Barriers to American Leadership in Artificial Intelligence

**MISSION READINESS. RISK REDUCTION. AMERICAN LEADERSHIP.**

#### Mission: Standardizing the Federal AI Governance Framework

Novawerke AI's Artificial Intelligence Governance Template Initiative (AIGTI) brings structure and comparability to the federal AI landscape. By replacing fragmented documentation with interoperable templates, agencies achieve mission readiness faster, at lower cost, and with greater accountability.

#### The Challenge: Fragmentation and Operational Risk

Federal agencies face a patchwork of AI compliance formats, vocabularies, and internal review processes. This fragmentation slows innovation, increases operational risk, and undermines the ability to compare readiness across agencies. Without standardization, leadership cannot efficiently manage or measure progress in the national AI portfolio.

#### The Solution: The AIGTI Framework

AIGTI provides a unified documentation suite including standardized inventory schema, risk registers, model cards, waiver workflows, and acquisition clauses. These tools enable consistent, efficient, and transparent AI program governance aligned with Executive Order 14179 and OMB M-25-21.

#### Impact: Efficiency, Savings, and Confidence

- 🕒 **Faster Readiness** — Cut AI audit preparation time from months to weeks.
- 💰 **Federal Savings** — Reduce duplication and reporting overhead across agencies.
- 🛡️ **Reduced Risk** — Ensure compliance with transparent, comparable documentation.

AIGTI strengthens American control over its AI future — ensuring that U.S. systems remain efficient, transparent, and sovereign. By standardizing the language of compliance, Novawerke AI helps agencies lead with confidence and integrity.
