

# The Magic Glove

*Grip meets data. A smart wearable to improve your golf game.*

## Overview:

The Magic Glove is a sensor-enhanced golf glove that tracks grip pressure, wrist angle, and hand motion then provides real-time feedback based on data from pro golfers. It helps players correct technique through actionable insight.

## What It Does:

- Tracks grip, rotation, and angle in real time
- Compares against baseline data from PGA professionals
- Delivers coaching feedback via app, voice, or downloadable reports
- Wireless, lightweight, and easy to use on the course or range

## Who Its For:

Golf coaches, amateurs improving form, seniors relearning technique, youth learning the basics

## Why It Matters:

A proper grip is the foundation of every swing. The Magic Glove uses biometrics and AI to make invisible mistakes visible and correctable.

## Status:

In sensor layout testing and baseline dataset creation. Seeking biomechanics advisors, wearable tech engineers, and testers.
